

# Instructions for the demo

---

Execute the following commands:

```
terraform init
terraform validate
terraform plan
terraform apply
```

**Note:** Points to highlight

- We are using AWS provider and will deploy the infrastructure in eu-west-1 (Ireland)
- We are creating s3 resource in aws in eu-west-1 region. (sample code can be copied from <https://www.terraform.io/>)
- Explain the arguments and various attributes that can be used for creating resource aws s3
- Execute all the commands and the significance of each command
- Explain briefly state file and the lock file which gets created while terraform apply command executes
