Instructions for the demo

Execute the following commands:

```
terraform init
terraform validate
terraform plan -out "vpc.tfplan"
terraform apply "vpc.tfplan"
terraform show
```

Note: Points to highlight

- Explain data source - a special kind of resource called as a data source. Refer to
  https://www.terraform.io/docs/configuration/data-sources.html to understand more on data sources

- How data is read from a data source like aws_availability_zones or aws_ami and can be used in other
  resources like aws_instance

- Explain how to declare the output values and its significance. Refer to
  hhttps://www.terraform.io/docs/configuration/outputs.html to understand more on data sources
