Instructions for the demo

Execute the following commands:

```
terraform init
terraform validate
terraform plan -out "s3.tfplan"
terraform apply "s3.tfplan"
terraform show
```

Note: Points to highlight

- There can be multiple .tf files in one directory.

- Declaration of the variables is done in variables.tf

- Definition of the variables is in terraform.tfvars.

- Terraform considers all the .tf files and creates the dependency graph.

- Refer to https://www.terraform.io/docs/configuration/variables.html to understand more on variables
